

<div>DEFINITION</div> <div>Center of a ring R</div>	<ul style="list-style-type: none"> $\{z \in R \mid zr = rz \text{ for all } r \in R\},$ “The set of all elements which commute with R.”
<div>PROOF TECHNIQUE</div> <div>Subring Criterion for $S \subset R$</div>	<ul style="list-style-type: none"> $S \neq \emptyset$ $x - y \in S$ (closed under subtraction) $xy \in S$ (closed under multiplication)
<div>DEFINITION</div> <div>Characteristic of a ring R</div>	<p>The characteristic $\text{char}(R)$ is the smallest positive number n such that</p> $\underbrace{1 + \cdots + 1}_{n \text{ summands}} = 0.$ <p>This also means that any element vanishes when added to itself this many times.</p>
<div>DEFINITION</div> <div>Ring</div>	<ul style="list-style-type: none"> $(R, +)$ is an abelian group (associative, identity, inverse, commutative) (R, \times) is a monoid (associative, identity) \times distributes over $+$ from either side. (distributive)

<div>DEFINITION</div> <div>Unique Factorization Domain</div>	<div>An integral domain R in which every non-zero element $x \in R$ can be written as a product (an empty product if x is a unit) of irreducible elements p_i of R and a unit u:</div> <div>$x = u p_1 p_2 \dots p_n \quad \text{with } n \geq 0$</div>
<div>DEFINITION</div> <div>Principal Ideal Domain (PID)</div>	<div>An integral domain in which every ideal is a principal ideal.</div>
<div>DEFINITION</div> <div>Principal Ideal</div>	<div>An ideal $I \trianglelefteq R$ generated by a single element. That is if $\langle a \rangle = I$, start with $a \in R$, and make all the elements possible by multiplying something in R by a, and then make all elements possible by finite sums of those elements.</div>
<div>DEFINITION</div> <div>Discrete Valuation</div>	<div>$v : R^\times \rightarrow \mathbb{Z}$ such that</div> <ul style="list-style-type: none"> v is surjective $v(ab) = v(a) + v(b)$ $v(x + y) \geq \min\{v(x), v(y)\} \quad \forall x + y \neq 0$

<div>DEFINITION</div> <div>Ideal $S \trianglelefteq R$</div>	<ul style="list-style-type: none"> $S \neq \emptyset$ S closed under subtraction $rs, sr \in S \quad \forall s \in S, r \in R.$ (S absorbs multiplicands in R.)
<div>PROPOSITION</div> <div>Let $\varphi : R \rightarrow S$ be a homomorphism.</div> <div>What do we know about $\text{Im } \varphi$ and $\ker \varphi$?</div>	<ul style="list-style-type: none"> $\text{Im } \varphi \subset S_{\text{ring}}$ $\ker \varphi \trianglelefteq R$
<div>DEFINITION</div> <div>Augmentation ideal of RG</div>	<div>An element in the augmentation ideal of a group ring is of the form $\sum r_i g_i$, where $\sum r_i = 0$.</div>
<div>DEFINITION</div> <div>Nilradical</div>	<div>The nilradical of a ring is an ideal consisting of all the nilpotent elements, that is,</div> <div>$\{r \in R : r^k = 0 \text{ for some } k\}$</div>

<div>DEFINITION</div> <div>Radical of ideal I</div>	<div> <p>The radical of a ring ideal I is itself an ideal consisting of all the I-potent elements, that is,</p> $\{r \in R : r^k \in I \text{ for some } k\}$ </div>
<div>DEFINITION</div> <div>Group Ring</div>	<div> <p>Let R be a commutative ring with $1 \neq 0$ and G a finite multiplicative group. Then RG is</p> $a_1g_1 + \cdots + a_ng_n \quad a_i \in R.$ <p>with addition defined “componentwise”:</p> $\sum_{i=1}^n a_i g_i + \sum_{i=1}^n b_i g_i = \sum_{i=1}^n (a_i + b_i) g_i$ <p>and multiplication defined by</p> $(a g_i)(b g_j) = (ab)(g_i g_j) = c g_k$ <p>and extending via the distributive property (taking care if R is not commutative).</p> </div>
<div>THEOREM</div> <div>The First Isomorphism Theorem for Rings</div>	<div> <p>Let $\phi : R \rightarrow S$ be a ring homomorphism. Then</p> <ul style="list-style-type: none"> $\ker(\phi) \trianglelefteq R$, $\phi(R) \subset_{\text{ring}} S$, and $R / \ker(\phi) \cong \phi(R)$. </div>
<div>THEOREM</div> <div>The Second Isomorphism Theorem for Rings</div>	<div> <p>Let $A \subset_{\text{ring}} R$, $I \trianglelefteq R$. Then</p> <ul style="list-style-type: none"> $A + I = \{a + i : a \in A, i \in I\} \subset_{\text{ring}} R$, $A \cap I \trianglelefteq A$, and $(A + I) / I \cong A / (A \cap I)$. </div>

<div data-bbox="119 85 236 116" data-label="Text"> <p>THEOREM</p> </div> <div data-bbox="51 257 746 297" data-label="Section-Header"> <h3>The Third Isomorphism Theorem for Rings</h3> </div>	<div data-bbox="924 190 1278 342" data-label="List-Group"> <p>Let $I, J \trianglelefteq R$ with $I \subseteq J$. Then</p> <ul style="list-style-type: none"> $J/I \trianglelefteq R/I$ $(R/I) \big/ (J/I) \cong R/J$. </div>
